Application — Full Stack Developer

Dear Hiring Team,

I am applying for the Full Stack Developer role at Open Ownership. Your description — "a team building reliable, modern software" — is exactly the kind of environment I want to work in, and the tech stack you use is one I have been building with for the past two years.

I am a final-year Computer Science student at Mulungushi University, graduating in August 2026. Over the course of my degree I have not waited for the classroom — I have built and shipped real systems. My final year project was a **real-time smart grid monitoring platform for ZESCO**, Zambia's national electricity utility: ESP32 sensor nodes transmitting electricity data over LoRaWAN into a Supabase/PostgreSQL backend, surfaced across two React dashboards for operators and consumers. Building that end-to-end — from firmware to cloud to UI — taught me more about production software than anything else I have done.

Beyond that, I have built **Reservit**, a mobile event management and ticketing platform in React Native with Airtel Money payment integration and QR code ticketing; **BusTicketTeT**, a multi-company bus booking app with admin compliance dashboards; and two professional client projects under NDA — one a full-stack enterprise platform, the other a logistics web app with containerised deployment and a CI/CD pipeline. The technologies your team works with match mine closely:

React

TypeScript

Node.js

Docker

Git / GitHub Actions

Supabase / PostgreSQL

CI/CD

I also use AI tools — **Claude, ChatGPT, and Cursor** — as a core part of how I develop, not to replace judgement but to move faster and write better code. I have contributed to open source (RuView, a WiFi sensing platform; Zuluru3, a Docker deployment) and had research on AI-powered language translation accepted by ZICTA in 2025.

Golang is not currently in my daily stack, but I learn languages fast — I have shipped in TypeScript, JavaScript, Python, C++, PHP, MQL5, and Java. Go's philosophy around simplicity resonates with how I already think about backend design, and I am prepared to ramp up quickly.

What draws me to Open Ownership specifically is the emphasis on product thinking alongside engineering. I want to understand what I am building and why, not just implement tickets. I believe I can contribute meaningfully from day one and grow fast within your team.

You can see my projects, writing, and background in full at my portfolio: **website-alpha-hazel-69.vercel.app** — it gives a clearer picture of who I am and how I work than a CV alone can.

Thank you for your time. I would love the opportunity to talk.

Sincerely,

Mapalo Musonda

FULL STACK DEVELOPER
